From: _____

Doctors are increasingly reporting that bacterial infections fail to respond to antibiotics. That's because our "miracle" drugs are being overused...and misused. Part of the problem: they're being fed to healthy farm animals to promote growth and to compensate for unsanitary conditions on factory farms. As a member of the Center for Science in the Public Interest (CSPI), I urge you to work with Congress and the FDA to ban the use of medically important antibiotics in healthy livestock and poultry.
