The good news: beef hasn’t been this low since the 1950s. That may cut the risk of heart disease and colon cancer and help curb greenhouse gas emissions.

On the downside, chicken can’t seem to pull away from beef. What’s more, red meat (mostly beef plus pork) is at 74 pounds per person per year. That still trumps white meat (poultry plus seafood), at 65 pounds.

We’re on the right track, but we’re moving too slowly away from burgers and friends.

Dairy: C–

Pizza, burgers, burritos, nachos, quesadillas. There’s cheese in our salads, our sandwiches, our soups, and our pizza crust. Since 1970, we’ve gone from 8 pounds per person per year to 23 pounds. That’s bad news for our arteries and waistlines. On the bright side, full-fat ice cream is dipping, and (mostly low-fat) yogurt is booming. We’re up to 9 pounds per person. If only it weren’t so sugary.

Grains: C

Breads, bagels, cereal, pasta, rice, crackers, granola bars, pizza, burritos, wraps, pretzels, paninis, cookies, scones, muffins, and other grain foods are still going gangbusters. All told, we eat 109 pounds of flour per year. Thanks to the rise in corn flour, that’s not too far from the 116-pound peak of 2000 (right before the low-carb craze).

We need to switch to whole grains...and cut back on all grains.

Sweeteners:

Fruit (minus juice) & Vegetables (minus potatoes)

Source for all graphs: U.S. Department of Agriculture.
We started eating more vegetables (not counting potatoes) in the 1980s, but the rise has stalled. And fruit (not counting juice) is still pretty much where it was in 1970. We need to replace sandwiches with salads, swap starches for veggies, and trade cookies, cupcakes, and chips for fresh fruit.

Potatoes have been flat (if you add fresh plus frozen). At least we’re not eating more french fries.

Fruits & Vegetables: B–

We started eating more vegetables (not counting potatoes) in the 1980s, but the rise has stalled. And fruit (not counting juice) is still pretty much where it was in 1970. We need to replace sandwiches with salads, swap starches for veggies, and trade cookies, cupcakes, and chips for fresh fruit.

Potatoes have been flat (if you add fresh plus frozen). At least we’re not eating more french fries.

Milk: B

In 1970, the average American drank 21 gallons of milk per year. Now we’re down to 13 gallons. And whole milk has plummeted from 18 gallons to just 4. That’s a success story. But fat-free and low-fat (1%) milk still account for only a third of the milk we drink, so we could do even better.

Unfortunately, we’re still consuming much of the butterfat we used to get from whole milk. The difference: now we get it from cheese.
