

DYING FOR A COOKIE?

**PALM OIL PRODUCTION IS KILLING ORANGUTANS
AND OTHER ENDANGERED WILDLIFE**

Orangutans are literally dying for cookies. Thanks in part to a palm oil trade propped up by indifferent corporations and authoritarian regimes, the rainforest habitats of the last remaining Sumatran orangutans, tigers, and rhinoceroses are being destroyed. Keebler, Oreo, Mrs. Fields, Pepperidge Farm and other companies use palm oil in some of their cookies. It's found increasingly in crackers, pastries, cereals, and microwave popcorn. Though not as unhealthy as partially hydrogenated oil, palm oil still promotes heart disease. Be sure to read labels and select products with non-hydrogenated soybean, corn, canola, or peanut oils, which don't harm your arteries—or the rainforest. **We can find other ways of making cookies. We can't find other ways of making orangutans.**
